

DETERMINING APPROPRIATE SALARY RATES OR RELATIONSHIPS USING THE SALARY SCHEDULES

1. To determine a one-step (5%) increase.

- a. Locate the employee's current salary rate (\$1569) in column one (Monthly Rate).
 b. Moving to the right, locate the one-step differential (\$1647) in column two (Plus 5%).

<u>Mthly Rate</u>	<u>Plus 5%</u>	<u>Daily Equip</u>	<u>Hr/Equip 40 Hr Wk</u>	<u>Hourly 1 ½ Rate</u>	<u>Hourly ½ Rate</u>
\$1569	\$1647	\$72.41	\$9.05	\$13.57	\$4.52
(5%)					
$\$1569 \times 1.05 = \1647.45					
Rounded to \$1647					

2. To determine a one-step (5%) decrease.

- a. Locate the employee's current salary rate (\$1695) in column two (Plus 5%).
 b. Moving to the left, locate the one-step differential (\$1614) in column one (Monthly Rate).

<u>Mthly Rate</u>	<u>Plus 5%</u>	<u>Daily Equip</u>	<u>Hr/Equip 40 Hr Wk</u>	<u>Hourly 1 ½ Rate</u>	<u>Hourly ½ Rate</u>
\$1614	\$1695	\$74.49	\$9.31	\$13.96	\$4.65
(5%)					
$\$1695 \div 1.05 = \1614.29					
Rounded to \$1614					

3. To determine a two-step (10%) increase.

- a. Locate the employee's current salary rate (\$1569) in column one (Monthly Rate).
 b. Moving to the right, locate the one-step differential (\$1647) in column two (Plus 5%).
 c. Locate the one-step differential (\$1647) in column one (Monthly Rate).
 d. Moving to the right, locate the one-step differential (\$1729) in column two (Plus 5%).

<u>Mthly Rate</u>	<u>Plus 5%</u>	<u>Daily Equip</u>	<u>Hr/Equip 40 Hr Wk</u>	<u>Hourly 1 ½ Rate</u>	<u>Hourly ½ Rate</u>
\$1569	\$1647	\$72.41	\$9.05	\$13.57	\$4.52
\$1647	\$1729	\$76.01	\$9.50	\$14.25	\$4.75
(5%)		(5%)			
$\$1569 \times 1.05 = \1647.45 (rounded to \$1647) $\times 1.05 = \$1729.35$					
(Rounded to \$1729) Note: Product must be compounded.					

SECTION 7: PERMANENT SALARY CONVERSION TABLES

4. To determine a two-step (10%) decrease.
 - a. Locate the employee's current salary rate (\$1695) in column two (Plus 5%).
 - b. Moving to the left, locate the one-step differential (\$1614) in column one (Monthly Rate).
 - c. Locate the one-step differential (\$1614) in column two (Plus 5%).
 - d. Moving to the left, locate the one-step differential (\$1537) in column one (Monthly Rate).

<u>Mthly Rate</u>	<u>Plus 5%</u>	<u>Daily Equiv</u>	<u>Hr/Equiv 40 Hr Wk</u>	<u>Hourly 1 ½ Rate</u>	<u>Hourly ½ Rate</u>
\$1614	\$1695	\$74.49	\$9.31	\$13.96	\$4.69
\$1537	\$1614 (5%)	\$70.95	\$8.87	\$13.30 (5%)	\$4.43

$\$1695 \div 1.05 = \1614.29 (rounded to \$1614) $\div 1.05 = \$1537.14$

(Rounded to \$1537) **Note: Product must be compounded.**

5. To determine the greatest benefit allowable upon transfer based on DPA Rule 599.674(b), the Salary Schedule method should be used as opposed to the Calculation Product Methods.

Example: The employee is currently appointed to a class with a maximum salary rate of \$3000. When applying the Salary Schedule method, the employee may transfer to a class with a maximum salary rate of \$3307. When applying the Calculation Product Method, the employee may not transfer to a class with a maximum salary rate of \$3307, as the result is a percentage difference of 10.2%.

Salary Schedule Method

- a. Locate the maximum salary rate of the employee's current classification (\$3000) in column one (Monthly Rate).
- b. Moving to the right, locate the one-step differential (\$3150) in column two (Plus 5%).
- c. Locate the one-step differential (\$3150) in column one (Monthly Rate).
- d. Moving to the right, locate the one-step differential (\$3308) in column two minus 1 = \$3307.

Calculation Product Method

From Maximum	\$3000
To Maximum	\$3307
Difference	+ \$307
Divide by lower Maximum	\$3000
Percentage Difference	0.1023 = 10.2%

The employee shall be allowed to transfer based on DPA Rule 599.674(b) with a 9.9 percentage difference provided that State Personnel Board transfer rules are met.
