Get Your COVID-19 Test Today

Why Should You Get Tested?

- Help keep your friends, family and colleagues safe.

- Testing is one layer in a multi-layered approach to preventing the spread of COVID-19.

- Testing will help individuals who are infected access treatment and isolate sooner, preventing the spread and keeping people healthy.

- Many people who have COVID-19 can spread it to others despite not having symptoms.

- Other key prevention measures include vaccination, mask wearing, improved ventilation, physical distancing, respiratory and hand hygiene, and isolating infected individuals.

How Much is the Test?

There are no out-of-pocket costs for medically necessary testing. The testing provider will bill your insurance directly. Testing is free at state testing sites.

For more information, scan with your cell phone camera.

Did You Test Positive?

Help stop the spread by answering the call or text from your health department. Also, if you have CA Notify activated on your phone, choose to anonymously alert those you may have exposed. For more information, visit canotify.ca.gov.
